
PURPOSE OF THE BLIGHT AND SUBSTANDARD STUDY

The purpose of completing this Blight and Substandard study is to examine existing conditions within a specific part of Grand Island. This study has been commissioned by the Tim Plate in order to analyze the possibility of declaring the area as blighted and substandard.

The City of Grand Island, when considering conditions of Blight and Substandard, will be looking at those issues and definitions provided for in the Nebraska Community Redevelopment Law as found in Chapter 18, Section 2104 of the Revised Nebraska State Statutes, as follows:

"The governing body of a city, to the greatest extent it deems to be feasible in carrying out the provisions of Sections 18-2101 to 18-2144, shall afford maximum opportunity, consistent with sound needs of the city as a whole, to the rehabilitation or redevelopment of the community redevelopment area by private enterprises. The governing body of a city shall give consideration to this objective in exercising its powers under sections 18-2101 to 18-2144, including the formulation of a workable program, the approval of community redevelopment plans consistent with the general plan for the development of the city, the exercise of its zoning powers, the enforcement of other laws, codes, and regulations relating to the use and occupancy of buildings and improvements, the disposition of any property acquired, and providing of necessary public improvements".

The Nebraska Revised Statutes §18-2105 continues by granting authority to the governing body for formulation of a workable program. The statute reads,

"The governing body of a city or an authority at its direction for the purposes of the Community Development Law may formulate for the entire municipality a workable program for utilizing appropriate private and public resources to eliminate or prevent the development or spread of urban blight, to encourage needed urban rehabilitation, to provide for the redevelopment of substandard and blighted areas, or to undertake such of the aforesaid activities or other feasible municipal activities as may be suitably employed to achieve the objectives of such workable program. Such workable program may include, without limitation, provision for the prevention of the spread of blight into areas of the municipality which are free from blight through diligent enforcement of housing, zoning, and occupancy controls and standards; the rehabilitation or conservation of substandard and blighted areas or portions thereof by replanning, removing congestion, providing parks, playgrounds, and other public improvements by encouraging voluntary rehabilitation and by compelling the repair and rehabilitation of deteriorated or deteriorating structures; and the clearance and redevelopment of substandard and blighted areas or portions thereof."

Blight and Substandard are defined as the following:

"Substandard areas means an area in which there is a predominance of buildings or improvements, whether nonresidential or residential in character, which, by reason of dilapidation, deterioration, age or obsolescence, inadequate provision for ventilation, light, air, sanitation, or open spaces, high density of population and overcrowding, or the existence of conditions which endanger life or property by fire and other causes, or any combination of such factors, is conducive to ill health, transmission of disease, infant mortality, juvenile delinquency, and crime, (which cannot be remedied through construction of prisons), and is detrimental to the public health, safety, morals, or welfare;"

"Blighted area means an area, which (a) by reason of the presence of a substantial number of deteriorated or deteriorating structures, existence of defective or inadequate street layout, faulty lot layout in relation to size, adequacy, accessibility, or usefulness, insanitary or unsafe conditions, deterioration of site or other improvements, diversity of ownership, tax or special assessment delinquency exceeding the fair value of the land, defective or unusual conditions of title, improper subdivision or obsolete platting, or the existence of conditions which

endanger life or property by fire and other causes, or any combination of such factors, substantially impairs or arrests the sound growth of the community, retards the provision of housing accommodations, or constitutes an economic or social liability and is detrimental to the public health, safety, morals, or welfare in its present condition and use and (b) in which there is at least one of the following conditions: (i) Unemployment in the designated area is at least one hundred twenty percent of the state or national average; (ii) the average age of the residential or commercial units in the area is at least forty years; (iii) more than half of the platted and subdivided property in an area is unimproved land that has been within the city for forty years and has remained unimproved during that time; (iv) the per capita income of the area is lower than the average per capita income of the city or village in which the area is designated; or (v) the area has had either stable or decreasing population based on the last two decennial censuses. In no event shall a city of the metropolitan, primary, or first class designate more than thirty-five percent of the city as blighted, a city of the second class shall not designate an area larger than fifty percent of the city as blighted, and a shall not designate an area larger than one hundred percent of the as blighted;"

This Blight and Substandard Study is being considered a "micro-blight" area under the definition established by the City of Grand Island. The Study is intended to give the Grand Island Community Redevelopment Authority, Hall County Regional Planning Commission and Grand Island City Council the basis for identifying and declaring Blighted and Substandard conditions existing within the City's jurisdiction and as allowed under Chapter 18, Section 2123.01. Through this process, the City and property owners will be attempting to address economic and/or social liabilities which are harmful to the well-being of the entire community.

The study area can be seen in Figure 1 of this report. A Redevelopment Plan to be submitted in the future will contain, in accordance with the law, definite local objectives regarding appropriate land uses, improved traffic, public transportation, public utilities and other public improvements, and the proposed land uses and building requirements in the redevelopment area and shall include:

- The boundaries defining the blighted and substandard areas in question (including existing uses and conditions of the property within the area), and
- A list of the conditions present which qualify the area as blighted and substandard.

BLIGHT AND SUBSTANDARD ELIGIBILITY STUDY

This study targets a specific area within an established part of the community for evaluation. The area is indicated in Figure 1 of this report. The existing uses in this area includes several industrial uses, commercial uses and a limited number of residential uses within the corporate limits of Grand Island.

Through the redevelopment process the City of Grand Island can guide future development and redevelopment throughout the area. The use of the Community Redevelopment Act by the City of Grand Island is intended to redevelop and improve the area. Using the Community Redevelopment Act, the City of Grand Island can assist in the elimination of negative conditions and implement different programs/projects identified for the City.

The following is the description of the designated area within Grand Island.

Lot 1, 2 and 3 of Memorial Place Subdivision

Study Area

EXISTING LAND USES

The term “Land Use” refers to the developed uses in place within a building or on a specific parcel of land. The number and type of uses are constantly changing within a community, and produce a number of impacts either benefitting or detracting from the community. Because of this, the short and long-term success and sustainability of the community is directly contingent upon available resources utilized in the best manner given the constraints the City faces during the course of the planning period. Existing patterns of land use are often fixed in older communities and neighborhoods, while development in newer areas is often reflective of current development practices.

Existing Land Use Analysis within Study Area

As part of the planning process, a survey was conducted through both in-field observations, as well as data collection online using the Hall County Assessors website. This survey noted the use of each parcel of land within the study area. These data from the survey are analyzed in the following paragraphs.

TABLE 1: EXISTING LAND USE, GRAND ISLAND - 2016

Type of Use	Acres	Percent of Developed land within the Study Area	Percent of Study Area
Residential	0.74	100.0%	59.2%
Single-family	0	0.0%	0.0%
Multi-family	0.74	100.0%	59.2%
Manufactured Housing	0	0.0%	0.0%
Commercial	0	0.0%	0.0%
Industrial	0.00	0.0%	0.0%
Quasi-Public/Public	0	0.0%	0.0%
Parks/Recreation	0	0.0%	0.0%
Transportation	0.00	0.0%	0.0%
Total Developed Land	0.74	100.0%	
Vacant/Agriculture	0.51		40.8%
Total Area	1.25		100.0%

Source: Marvin Planning Consultants 2016

Table 1 includes the existing land uses for the entire study area. The table contains the total acres determined per land use from the survey; next is the percentage of those areas compared to the total developed land; and finally, the third set of data compare the all land uses to the total area within the Study Area. The Study Area is made up of multi-family (59.2%) and land considered vacant accounts for only 40.8% of the total area.

FINDINGS OF BLIGHT AND SUBSTANDARD CONDITIONS ELIGIBILITY STUDY

This section of the study examines the conditions found in the study area. The Findings Section will review the conditions based upon the statutory definitions.

CONTRIBUTING FACTORS

There were a number of conditions examined and evaluated in the field and online. There are a number of conditions that will be reviewed in detail, on the following pages, while some of the statutory conditions are not present.

Age of Structure

Age of structures can be a contributing factor to the blighted and substandard conditions in an area. Statutes allow for a predominance of structures 40 years of age or older to be a contributing factor regardless of their condition. The following paragraphs document the structural age of the structures within the Study Area. Note the age of structure was determined from the Appraisal data within the Hall County Assessor's website data.

Within the study area there is a total of two primary structures. After researching the structural age on the Hall County Assessor's and Treasurer's websites, the following breakdown was determined:

- 2 (100.0%) units were determined to be 40 years of age or older

The age of the structures would be a direct contributing factor.

Figure 3
Unit Age Map

Source: Google Earth and Marvin Planning Consultants, 2016

Structural Conditions

Structural conditions were evaluated, structures were either rated as: Very Good, Good, Fair, Average, or badly worn. The data and rating system comes from the Hall County Assessor's database and is the same database used to value properties in the area.

Based upon the data provided to the planning team, the following is the breakdown for structures in the study area:

- 0 (0.0%) structures rated as very good
- 0 (0.0%) structures rated as good
- 0 (0.0%) structure rated as fair
- 2 (100.0%) structures rated as average
- 0 (0.0%) structure rated as badly worn

Figure 4
Structural Conditions

Source: Google Earth and Marvin Planning Consultants, 2016

Based upon these data, an assumption has been made that average condition and less would constitute less than desirable conditions due to age and conditions. It is common for older structures to get more maintenance and upkeep in order to maintain a good or higher condition. Even an average structure will show some signs of deteriorating which in turn can become a dilapidated structure in the future if it is not addressed over time. Overall, 100.0% of the structures in this study area are average condition or worse.

Due to the stated conditions found in the Hall County Assessor's data, the condition of the structure is a contributing factor.

Deterioration of Site or Other Improvements

Site Improvements Conditions

The properties within the study area are accessed via a common driveway through an access easement on the site. Currently, a portion of the driveway is in a deteriorating state in certain areas. In addition, there has been a great deal of crack sealant used on the driveway accessing this study area.

Figure 5

Deterioration of Site or Other Improvements

Source: Google Earth and Marvin Planning Consultants, 2016

Based upon the field analysis, there are sufficient elements present to meet the definition of deterioration of site and other improvements in the Study Area.

Combination of factors which are impairing and/or arresting sound growth

Within this study area there is critical factor impairing or arresting sound growth. This is the inability to extend city services, without substantial cost to Lot 3 of this subdivision.

Based upon the review of the area, there is one sufficient element present to meet the definition of combination of factors which are impairing and/or arresting sound growth within the Study Area.

Stable or decreasing population based on the last two decennial censuses

Over the past 20 years the population within the study area has been stable or decreasing. The population within the Study Area has had limited population for the past two decennial censuses. Therefore, it meets the criteria for a stable or decreasing population.

Blighting Summary

These conditions are contributing to the blighted conditions of the study area.

- **Average age of structures is over 40 years of age**
 - Within the Study Area 100.0% of the structures meet the criteria of 40 years of age or older.
- **Substantial number of deteriorating structures**
 - Within the study area 100.0% of the structures were deemed to be in average condition.
- **Deterioration of site or other improvements**
 - Damage to the existing driveway providing access to the study area.
- **Combination of factors which are impairing and/or arresting sound growth**
 - Extension of existing city services to Lot 3 of the Subdivision cannot be accomplished without significant cost.
- **Stable or decreasing population based on the last two decennial censuses**
 - The population of the Study Area has remained stable over the past two decennial censuses.

The other criteria for Blight were not present in the area, these included:

- Insanitary and Unsafe Conditions
- Dangerous conditions to life or property due to fire or other causes
- Faulty Lot Layout
- Improper Subdivision or Obsolete Platting
- Defective/Inadequate street layouts
- Diversity of Ownership
- Tax or special assessment delinquency exceeding fair value of the land.
- Defective or unusual condition of title,
- Unemployment in the designated area is at least 120% of the state or national average.
- One-half of unimproved property is over 40 years old.
- The per capita income of the area is lower than the average per capita income of the city or village in which the area is designated.

These issues were either not present or were limited enough as to have little impact on the overall condition of the study area.

Substandard Conditions

Average age of the residential or commercial units in the area is at least 40 years

Age of structures can be a contributing factor to the blighted and substandard conditions in an area. Statutes allow for a predominance of units that are 40 years of age or older to be a contributing factor regardless of their condition. Note the age of structure was determined from the Appraisal data within the Hall County Assessor's website data.

Within the study area there is a total of two structures. After researching the structural age on the Hall County Assessor's and Treasurer's websites, the following breakdown was determined:

- 2 (100.0%) units were determined to be more than 40 years of age

There is a predominance of units 40 years of age or older.

Substandard Summary

Nebraska State Statute requires that "...an area in which there is a predominance of buildings or improvements, whether nonresidential or residential in character, which, by reason of dilapidation, deterioration, **age** or obsolescence, inadequate provision for ventilation, light, air, sanitation, or open spaces, high density of population and overcrowding, or **the existence of conditions which endanger life or property by fire and other causes**, or any combination of such factors, is conducive to ill health, transmission of disease, infant mortality, juvenile delinquency, and crime, (which cannot be remedied through construction of prisons), and is detrimental to the public health, safety, morals, or welfare;"

This Study Area in Grand Island meets the definition of Substandard as defined in the Revised Nebraska State Statutes.

FINDINGS FOR GRAND ISLAND BLIGHT STUDY AREA #23

Blight Study Area #23 has several items contributing to the Blight and Substandard Conditions. These conditions include:

Blighted Conditions

- **Average age of structures is over 40 years of age**
- **Substantial number of deteriorated or deteriorating structures**
- **Deterioration of site or other improvements**
- **Combination of factors which are impairing and/or arresting sound growth**
- **Stable or decreasing population based on the last two decennial censuses**

Substandard Conditions

- **Average age of the structures in the area is at least forty years**
