knagel@giud.com

ADDENDUM: Specification 107-13, Detailed Specification, Page 11 of 30 (**Changes in red**)

Exterior (second paragraph)

Saf-T-climb- Replace the top 50 feet of the exterior ladder safety system slide rail. **The top 20' feet shall be 316L Stainless Steel and the bottom 30' shall be galvanized steel.**

Air Space

As a separate attachment to the proposal, provide a firm, optional bid to add one safety gate at each of the three internal ladder platforms at elevations 170', 286' and 402'. The new gates shall comply with all OSHA requirements. The Owner will determine whether or not to add this Optional scope to the base scope at time of Award.

Interior Liner

High Pressure Water Wash the entire interior lining to remove all ash buildup to allow for a Class II inspection. The City will be responsible for wastewater removal from the base. **The Owner currently plans to use a vacuum truck for removal and disposal of the waste water on site, anticipating that the Contractor will use a high pressure, low volume water wash. Final disposal plans will be determined prior to the outage based on information required from the Contractor after receipt of the proposals.**
